1

Metal protection by KRAUTOL – simply in the system

Project 1

Rusty substrates/steel

Ferrous metal is one of the main building materials in homes, whether found in fences, garden furniture, gates, garage doors or guard rails. KRAUTOL offers system solutions to ensure a long service life for such ferrous metals, precisely matched to needs.

KRAUTOL rust protection system solutions

System 1: the simple solution

Directly on rust. For an instant result with a single product.

or

System 2: the professional solution

Maximum durability. For active rust protection, optimum adhesion and effective impact and scratch resistance.

or

RUSTY SUBSTRATES/STEEL

Rusty substrates/steel

System 1: the simple solution

Directly on rust. For an instant result with just one product.

Preparation and coating

Remove dirt, grease and loose rust from surface. Apply two layers of KRAUTOL Metal Protection or Hammer Blow Paint, depending on the desired surface appearance – glossy, matt or hammer blow effect. Ensure you apply a uniform coat covering the whole surface.

System 2: the professional solution

Maximum durability. For active rust protection, optimum adhesion and high impact and scratch resistance.

Preparation

Professionals recommend carefully removing rust with a wire brush or sandpaper to ensure maximum durability.

Primer and final coats

Pre-treat surface with one or two coats of KRAUTOL Rust Protection Primer. The priming coat contains active rust-protection pigments which prevent new rusting and enhance adhesive strength. Once the primer is dry, apply KRAUTOL Metal Protection or Hammer Blow Paint as desired.

Use solvent-resistant rollers or brushes (China bristle).

When using the recommended products, please observe our further product, processing and safety instructions found on the product packaging and our technical info sheets, available from our website at www.krautol.de.

Our suggestions are standard solutions for a variety of applications. They are based on extensive experience as a paint manufacturer. We recommend obtaining professional advice if you wish to apply coating to objects under special conditions.
